DETAILED ACTION

This office action is in response to the applicant's Amendment dated 6/27/2005, and RCE dated 7/27/2005.

The applicant amended claims 1 and 12.

The applicant added new Claim 23.

Claims 1-10, 12-21 and 23 are pending in this office action.

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 6/27/2005 has been entered.

Response to Arguments

2. Applicant's arguments in regard to Claims 1-8, 10 and 12-21 filed 6/27/2005 have been fully considered but they are not persuasive. In the interest of clarity, the examiner will rebut the applicant's arguments with the same art, but with different citations within the art.

As per Claims 1 and 12:

The applicant has argued that none of the references, Dreibelbis or Wong, disclose that the setting memory is only accessible via the registers of the buffer memory, and that the registers of the buffer memory are used as latches for reading out and writing to the setting memory. The examiner disagrees. The disclosure of Dreibelbis, as in FIG.2, teaches a processor ("Sequencer and DRAM Control Logic"), a buffer memory (FIG.6c Word and Databit Redundancy Allocation registers), and a setting memory (FIG.6d Failed Word Address Register CAM and "Register" in FIG.2). FIG.2 of Dreibelbis further shows the "Register" being accessible via the "Redundancy Allocation" register only. Also taught is that the access of the CAM and Databit Fail Register is only through scan-out (page 1736 column 2 last paragraph), which is through the buffer register latches (FIG.6c Word and Databit Redundancy Allocation registers), and therefore teaches that the setting memory (the CAM of FIG.6d) is only via the scan-in/scan-out registers shown in FIG.6a. In view of the teachings of Dreibelbis, and the further teaching of Wong, the examiner maintains the rejection under 35 USC 103 of Claims 1 and 12. And consequently, in view of the dependent Claims 2-8, 10 and 13-21, Claims 1-8, 10 and 12-21 are maintained as rejected.

3. Applicant's argument, see amendment filed 6/27/2005, with respect to Claim 9 has been fully considered and is persuasive. The rejection of Claim 9 under 35 USC 103 has been withdrawn.

Allowable Subject Matter

4. Claim 9 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims, and would be allowable for the same reason as outlined below for Claim 23.

5. Claim 23 is allowed. The following is a statement of reasons for the indication of allowable subject matter: The reference art of Dreibelbis, and the further teaching of Wong, teach an integrated circuit/method for determining setting data for a setting memory of a memory determined to be defective, comprising a processor, buffer memory, and setting memory, all interconnected, with the setting memory only accessible by the buffer memory shift register. However, the prior arts of record taken alone, or in combination failed to teach, anticipate, suggest, or render obvious the claimed invention or the method steps of the application. Specifically, as per Claim 23, the prior arts failed to teach, anticipate, suggest, or render obvious the limitation introduced into the claim, namely: the buffer memory shift register has at least one switch subdividing the shift register into registers for use of the processor.
